Colligo™

WORKGROUP EDITION

Create secure, wireless instant networks for workgroups on the go... no matter where you are.

Colligo enables mobile workgroups to collaborate through a simple process of Discover, Connect and Interact. Colligo's "Instant Networking" software allows WiFi-enabled notebooks, tablet PCs and PDAs to create "server free", direct connected ad hoc networks with a single button click. Users can then share data and interact with each other using common or corporate applications in a secure and reliable environment, regardless of whether they have access to the Internet or corporate servers. Colligo's products increase the productivity of nomadic workers by enabling them to act on information when and where it is created. Gone are frustrating data-sharing and communication methods, such as floppy disk, USB key swapping or slow infrared connections. Workgroups can now confidently "Colligo" each other with enterprise grade security anywhere.

Colligo Customer Comments:

"To a programmer it's amazing. To think you don't need a server to replicate with another user just seems ... surprising."

Tony Havranek, Manager of AWP, Crowe Chizek LLP.

"[Our professional staff] can go to any [client] location and immediately be a team and become effective. Nationwide, we use this very consistently."

Dave Johnson, Director of Infrastructure Technology, Grant Thornton LLP.

"Everybody on the wireless network is immediately synched so that they're all working off a common set of data."

Michael Calyniuk, Partner, PricewaterhouseCoopers LLP.

Have you ever needed to share data with your team, but couldn't find a reliable connection to your home network? Colligo® software solves this problem by enabling any laptop, tablet PC or pocket PC to instantly and securely network to one or more computers, wherever you are. At the coffee shop, in a taxi, at a customer/vendor, create an instant network with one click. Once you have the connection, you can share files, send messages, share an Internet connection, share a printer, compare calendars, replicate databases and much more. Why be tied to a network when you can "Colligo" anywhere?

Secure Instant Networking Anywhere

Discover, Connect and Interact. Colligo Workgroup Edition lets you create and use a Wireless instant network. Automatically discover other Colligo users in the vicinity and invite them into the network. Connect to multiple users without any other network connection.

Sync Data Without a Server

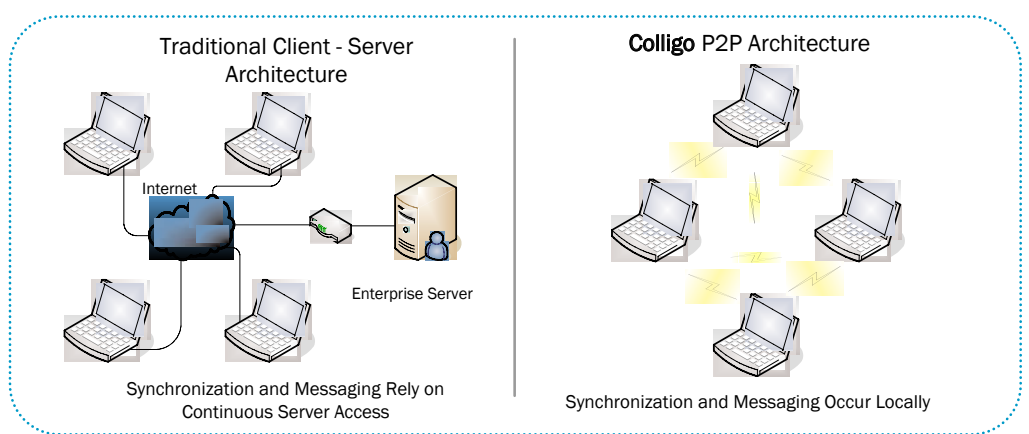

Quickly and securely synchronize databases or back up files to shared folders without the need for access to central servers. This reduces the risks associated with out of date information and ensures that confidential data is not lost on memory sticks.

Share Files, Calendars & Messages

Chat, interact and collaborate on a multi-page whiteboard, share Microsoft Outlook® calendars to book team meetings, drag and drop files and folders to instantly transfer them to others. Colligo is a much more efficient way to share data than mini-LANs, disk swapping or USB keys.

Share Printers & Internet Connections

Colligo reduces the cost and inconvenience of lugging redundant hardware into the field by enabling the entire team to access a single shared printer. Internet Connection Sharing eliminates the need for USB hubs and cables and multiple Ethernet connections.

Colligo™ WORKGROUP EDITION

Create secure, wireless instant networks for workgroups on the go . . . no matter where you are.

COLLABORATE ANYWHERE

Colligo helps people create an instant, unwired, connected workgroup anywhere they may choose to get together. It works without the need for a wireless access point so there is no need to worry about signal strength or the need for wires. In addition, if desired, Colligo securely connects users with different domains and security policies.

FAST

User-friendly, single-click functionality gets users up and running quickly with a minimum of training. Workers can move from a connected infrastructure to ad hoc mode within the Colligo software, working seamlessly in wired and wireless environments.

EXTENDS EXISTING APPLICATIONS

Colligo's products let people work together the way they want to by enabling existing applications to work over the instant network.

SECURE

Authentication and encryption ensures users work in a secure and private network without risks of intruders or viruses.

REDUCES SUPPORT COSTS

Reduced dependency on remote access connections and servers in the field has proven to lower the cost of supporting mobile teams.

LIGHTWEIGHT

IP-based architecture allows Colligo to operate on several hardware platforms, as well as wired and wireless networking technologies.

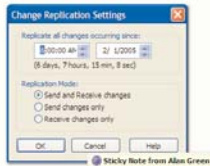

HARDWARE AGNOSTIC

With the choice of any laptop or handheld device and WIFI hardware, the user does not have to compromise on choice or cost. Users just need to add Colligo to their existing PC or PDA hardware. Windows PC Desktop, Notebook, Tablet PC, and Pocket PC PDAs all interoperate – they all "instant network" with each other.

INSTANT NETWORKING

Colligo Instant Network ad hoc Discovery

- With a single "click" configure and create a secure, private, ad hoc Colligo Instant Network of up to 50 users.

Authenticate

- Know who and what you're connecting to. Colligo's patent pending authentication method exceeds today's complicated standards for authenticating and eliminates wireless "man in the middle" attacks.

Secure

- From start to finish, Colligo's connections are secured by IPSec and 168-bit SSL, the standard that is trusted for banking and credit card transactions.

Set and See Status

- See the status of others and set your user status setting according to how you are able to work with others at any given time ("Do Not Disturb," "Available," or "Away").

Create Groups

- Organize your Colligo colleagues in user defined groups for more efficient interaction and viewing.

SHARE RESOURCES

Transfer Files

- Quickly transfer files and folders with other users in your instant network.

Share Folders

- Allow your team access to files within IPSec secured shared folders on your device, just as you share folders on your corporate network.

Share Printers

- Share any printers on your private Colligo Instant Network. Print from within applications.

Share an Internet Connection

- Create shared access to a single high speed Internet connection.

ESSENTIAL MOBILE FUNCTIONALITY

Sticky Notes

- Send and receive short Sticky Note messages to others on the instant network.

Chat in Real Time

- Participate in direct, real-time dialogs with users and save transcripts of the session.

Share Whiteboard

- Collaborate and share ideas in real-time using a multi-page shared whiteboard.

Share Outlook Functions

- Confidential sharing of contacts (VCards) and Microsoft® Outlook® calendars; view free/busy time slots and group meeting requests, just like you are connected to the server.

Share NetMeeting

- Share applications available through Microsoft NetMeeting™, without needing access to a NetMeeting server.

Archive All Transactions

- Optional transaction logging feature enables you to archive all sticky notes, file transfers and chats to your hard drive for later uploading.

Replicate Lotus Notes*

- Optionally replicate IBM Lotus Notes® databases without the need for a central server. *Colligo Workgroup Edition for Lotus Notes required.

Operating System Support

Notebook/Desktop PCs

- Microsoft® Windows® XP
- Microsoft® Windows® 2000 Service Pack 1 & 2
- Microsoft® Windows® 98 Second Edition

Tablet PCs

- Microsoft® Windows® XP Tablet PC

Handheld PCs

- Microsoft® Windows® Pocket PC 2000, 2002 and 2003

IBM Lotus Notes® Database*

- Lotus Notes R5 or R6

Hardware Recommendations

Notebook/Desktop/Tablet PCs

- Windows® PC (Pentium® II 450 MHz 64MB RAM)
- 802.11 wireless capability recommended (embedded or expansion card)

Handheld PCs

- Windows® Pocket PC Handheld (32MB RAM and PC Card Expansion Pack for network adapter if not embedded)

Colligo Networks, Inc. As the leading provider of "instant networking" software, Colligo is the fastest and simplest way for nomadic workers to network and interact with each other on the go, anytime, anywhere and with anyone. Through a process of "Discover, Connect and Interact", Colligo's patent-pending technology brings core mobility solutions to groups that need to interact when in connected, or nomadic disconnected and intermittent modes. Simply put, Colligo's products let people work together the way they want to, where they want. Colligo's products are being deployed by businesses and OEM customers in North America, Europe and Asia.
